/178/

342
373 Having, then, only two openings, the interior is always somewhat dark, being, in part, illuminated by the stoves (12).

*[192]

12. Sometimes, on one or more posts, which seem planted only for this purpose, they light at night a piece of resin called cicantá, which burns with a quite intense and long-lasting light, and leaves as residue a tar which also serves for calking the canoes.

574 In the modern family-huts, there is customarily an interior partition, generally made of bark. Perhaps this division, which is being adopted, has been suggested by the convenience when they must house some guest, especially the civilized. The Indian ordinarily is very hospitable; he not only receives guests for the great caxirís, but he also shelters any Indian or white who might be traveling. The first division near the door is reserved exclusively for the guests (see VII - 4, e 2 a).

[797] In some povoados, at the request of the Missionary, they build a large hut that serves for overnight stays of the Padre and as a chapel, when there is no other place reserved for worship.

342
*[192] Some malocas (and also Makú huts), in which the roof ends very close to the ground, completely or partially lack side walls. Such walls are regularly dispensed with in the oxkóro-áro (Nheengatú tapirí or papirí), or emergency huts, which they make in the distant clearings or on the banks of the rivers where they are accustomed to staying overnight on the occasion of trips and fishing expeditions.

177
342 Ordinarily the maloca or house is alone and contains all the family household goods. Auxiliary houses, however, are beginning to appear. The maloca of the Tuyuca, described above, has one of these. One of the Indians, knowing a little Portuguese, explained that it was the "succursal" of the maloca. Much smaller and only partially protected by side walls, made of straw and bark. There were about 14 hammocks reserved for the Makú in service, the flour oven, sieves, hampers, suspended tipitis,

224 373 During low water they also go hunting at night, drifting slowly and without making any noise, while one of the Indians brings a torch of turí. They thus surprise the pacas, which are blinded by the light, and the Indian kills them with arrows. [177] Nowadays they use a battery flashlight for night hunting.

6) Agriculture.

241 The mandioca is what provides the principal food of the Indians of the basin of the Uaupés. All these tribes are thus found in the phase of tillage, which is practiced, however, in a very primitive manner: it is the phase of the "cavouco" /digging, pit, hollow/ or of the "cova" /hole/.

They freely choose the land that pleases them the most, because of the proximity of their dwelling and because of the guarantee against theft (75),

> 75. For this reason he will not do it at the edge of the river, unless it is beside his dwelling. If it is in the vicinity of the river, he will always leave a wedge of forest between the clearing and the river, in order to hide it from the view of those who are traveling on the water. And the landing place where he disembarks and ties his canoe will be at a certain distance from the clearing, in order not to reveal its location.

and which is a little sandy, as the "terras-firmes" of the entire region generally are, and suitable for mandioca. The act of [423] * [192] clearing, wexsé pá:kũrõ, is what gives them the ownership of the land while cultivating it.

[462] Clearing is done in the periods of less rain, that is, from June to August and from December to February. It is work exclusively for the men. They start by choosing an area con- * [192] venient as to distance and not subject to floods, with yellowish soil, semisandy, di'tá sõarã, or black and somewhat humous, nãxkã di'tá ñyĩrõ.
